

Data Protection Using Off-site Backup Copies

Safeguard Your On-Premises Data With Unitrends Enterprise Backup For Microsoft Azure Cloud

Enhance your business continuity by protecting your most valuable asset—your data—off-site with the powerful backup and recovery capabilities of Unitrends Enterprise Backup in the Microsoft Azure Cloud.

Studies show that 90% of companies that lose more than a few days of their business information go out of business within the next 2 years. Creating off-site backup copies of your on-premises backups ensures the utmost protection for your business's valuable digital assets. The Cloud provides an effective alternative to sending tapes or other rotational media off-site for long-term retention. Additionally, Cloud backup can be obtained at a fraction of the cost of building your own secondary data center. Unitrends enables you to easily set this up by deploying Unitrends Enterprise Backup as a virtual machine (VM) in the Microsoft Azure cloud. Here it serves as the target for off-site backup copies from any of your on-site Unitrends Enterprise Backup or Recovery Series appliances.

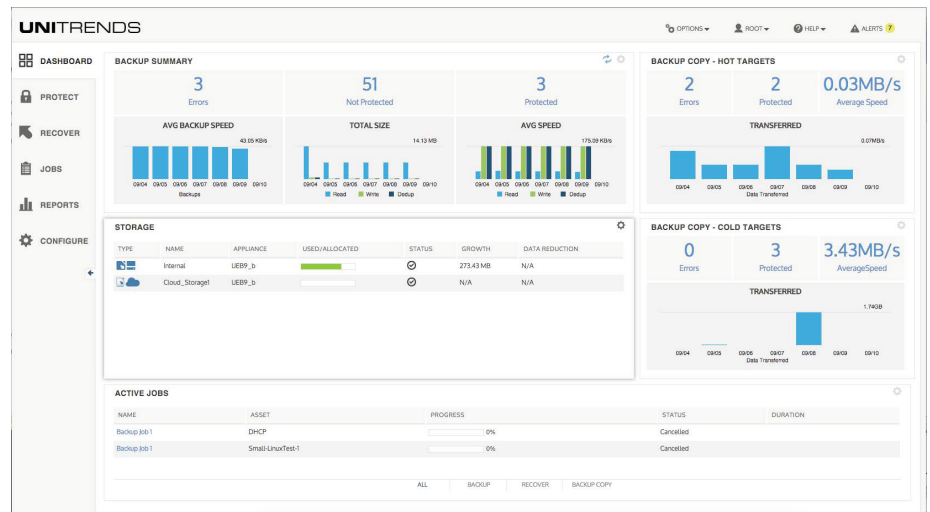

Off-site data protection with Unitrends Enterprise Backup in Microsoft Azure

Getting started is simple. Instantly provision Unitrends Enterprise Backup through the Microsoft Azure Marketplace. Upon your request, Azure spins-up a single VM. You can immediately begin to replicate backups from your on-site Unitrends appliances to the Unitrends Enterprise Backup deployed in Azure. Efficiently running on one VM, this single instance of Unitrends Enterprise Backup, can play a key role for your business continuity and provides all required backup, recovery and management capabilities.

Unitrends Enterprise Backup: Off-Site Backup Copies in Microsoft Azure

Use Case Brochure

Unitrends intuitive interface enables granular control of backup and recovery, on-site, in the cloud, and across both.

Unitrends Backup Centralized Management Dashboard

Key Solutions Features:

- **Frictionless deployment** - Easily provision Unitrends Enterprise Backup through the Azure Marketplace. Activate with a Unitrends Enterprise Backup license obtained through your Unitrends channel partner.
- **Safeguard your digital assets with off-site backup storage** - Protect your business from data loss with a backup copy located outside your data center using Unitrends Enterprise Backup in the Microsoft Azure Cloud.
- **Easily manage off-site backup copies** - Use the same intuitive Unitrends management dashboard to replicate backup copies from the Unitrends physical or virtual appliance in your data center to the cloud.
- **Quickly recover data** - Quickly recover the asset that you need from the cloud back to your users, whether it be it a file, an application, or entire volume.
- **Boosted WAN optimization** - With Unitrends at both ends of the WAN, acceleration techniques such as global deduplication and compression deployed in Unitrends Enterprise Backup and Recovery Series appliances have even more of an impact in minimizing WAN bandwidth requirements and speeding up transmission to and from the cloud.
- **Be secure with layers of protection** - Together Unitrend's built-in AES 256-bit encryption and Microsoft's ISO 27018 privacy standard provide multiple layers of assets protection.
